

pandoc-satysfi-template

Masaki Waga

1. pandoc-satysfi-template

A pandoc custom writer and template for SAT_YSF_I. You can convert any files supported by pandoc to SAT_YSF_I or PDF. You can generate the SAT_YSF_I and PDF versions of this README by `make` in the root directory.

2. Remark

This pandoc writer is incomplete i.e., it is unimplemented for some elements. Your contribution is highly appreciated!!

3. Requirements

- pandoc
- SAT_YSF_I

4. Options

You can use the following options by giving `-V <option_name>` to pandoc

- *show-title* If `-V show-title` is given, `satysfi` generates the title.
- *toc* If `-V toc` is given, `satysfi` generates the TOC (table of contents).

5. Note

The template file `template.satysfi` is for a `.saty` file not for a `.satyh` file. If you want

to convert to a .satyh file, you need to write a template by yourself. It is easy.

6. Example

```
pandoc -t ./satysfi.lua --template ./template.satysfi -s README.md -  
o README.saty -V show-title
```
